HEALTH INSURANCE STATISTICS

Releases in the Health Insurance Statistics series are designed to present current data from the Medicare program. Two series have been indicated to date—the Health Insurance (HI) series and the Current Medicare Survey (CMS) series which presents current data from a survey of a sample of the Medicare Population. The following recent releases have been issued:

Health Insurance Notes

<i>Number</i>	<i>Title</i>	<i>Date</i>
HI-53	Medicare: Use of Physicians' Services by Geographic Region, 1967 and 1968	February 8, 1974
HI-52	Health Insurance for the Aged, Monthly Reimbursements Per Person by State, 1971	December 5, 1973
HI-51	Utilization and Reimbursements Under Medicare for Persons Who Died in 1967 and 1968	October 10, 1973
HI-50	Short-Stay Hospitals Under Medicare, 1969: Use and Charges, By Major Discharge Diagnosis, 1969	August 17, 1973
HI-49	Health Insurance for the Aged: Persons Meeting the SMI Deductible, 1966-70	August 2, 1973
HI-48	Medicare: Participating Health Facilities, July 1972	July 20, 1973
HI-47	Medicare: Public Assistance Recipients in the Supplementary Medical Insurance Program 1969	July 5, 1973
HI-46	Assignment Rates for Supplementary Medical Insurance Claims, Calendar Years 1970-72	June 20, 1973
HI-45	Medicare: General Enrollment Period, 1972	June 8, 1973
HI-44	Medicare: Inpatient Hospital Services By Region, 1967 and 1968	May 30, 1973
HI-43	Utilization of Short-Stay Hospitals Under Medicare By Type of Control and Bed Size, 1969	May 25, 1973
HI-42	Health Insurance for the Aged: Hospital and Extended Care Admissions by State, Fiscal Year 1971	March 12, 1973

Current Medicare Survey Notes

CMS-28	Medical Insurance Sample: Prescription Drugs, 1967-71	October 12, 1973
CMS-27	Impact of Cost-Sharing on Use of Ambulatory Services Under Medicare: Preliminary Findings, 1969	October 10, 1973
CMS-26	Supplementary Medical Insurance: 1967-71 Trends and Fourth Quarter 1971	August 15, 1973

These reports and others in the HI and CMS series are available in many libraries. To receive each issue of the HI series or the CMS series, please send your request to the Publication Staff, Office of Research and Statistics, Social Security Administration, Room 1120 Universal North Building, 1875 Connecticut Avenue, N.W., Washington, D.C. 20009.

Foreword

THE AMOUNTS REIMBURSED under the two parts of the Medicare program--hospital insurance and supplementary medical insurance--have been published annually by county since the inception of the program in July 1966. This is the third report to publish a derived ratio for each county, based on the reimbursement data standardized for the age and sex distribution of the county population. This ratio, a "geographic index," provides a comparison of per capita county reimbursements under Medicare with the national average.

The concepts of the "geographic index" and the basic "age-sex index" were developed in the Office of the Actuary, and the tables prepared in the Bureau of Data Processing with the cooperation of the Office of Research and Statistics.

Medicare: Geographic Index of Reimbursement by State and County, 1971

The Medicare program was enacted on July 30, 1965, as Title XVIII of the 1965 Social Security Amendments (Public Law 89-97) and became effective July 1, 1966. The program makes available two separate but coordinated coverages—hospital insurance (HI), covering nearly all persons aged 65 and over, and supplementary medical insurance (SMI) covering those persons in this age group who enroll voluntarily and pay the required premiums.

Annually, amounts reimbursed under the program for enrolled persons in each State and county have been published for both parts of the program. The present report, based on the reimbursement data for 1971, presents a method of comparing the level of per capita reimbursement in each county with that for the country as a whole, as well as with other counties, by means of a geographic index.

Computation of the Index

The objective of the index is to associate with each county a “geographic index of reimbursement” (shortened to “geographic index” in tables 1-3). An index of, say 1.320 for county A and an index of 1.200 for county B would indicate that, independently of the effects of age and sex, the net resultant of all the other influences on reimbursement is a per capita reimbursement level in county A which is 110 percent of the per capita reimbursement level in county B.

In each calendar year the geographic index for “All Areas” is made equal to one so that the county geographic index for that year shows the ratio of the county per capita reimbursement in that year to that of “All Areas.” An increase from one year to the next in a county’s index does not, of itself, indicate an increase in per capita reimbursement. It indicates only an increase in the *ratio* of the county’s per capita reimbursement (adjusted for age and sex) to the corresponding “All Areas” figure.

The influences of age and sex should, if possible, be removed from the geographic index. This is done by

first calculating each year for each area an age-sex index. The index measures the extent to which average reimbursement per enrollee in two different areas (or in the same area in two different years) should differ from each other purely because of differences in the proportionate distribution of enrollees by age and sex.

A “standard” relative reimbursement for 5 year age-groups for each sex separately was first established by inspection of available data on average reimbursements per person enrolled for “All Areas.” The “standards” chosen were rounded for use in the index computation. A comparison with actual relative reimbursements for 1969 is shown in table A.¹

The method of computing the age-sex index for an area is shown in table B, where it is computed for Alabama. The age-sex index for the area is an average figure reflecting whether it has relatively more, or fewer, persons in the age-sex groups which have a high “standard” relative reimbursement. If one area age-sex index is, say 1.020 and another is 1.002 this means reimbursements per person in the first area would be expected to run 1.018 times those in the second area purely because of differences in the distribution of enrollees by age and sex.

The age-sex indices are designed so that the “All Areas” figure will be in the vicinity of unity. Nevertheless, the figures are independent of any one year’s experience. Using the most recently available data, the “All Areas” age-sex indices are:

Age-Sex Indices of Reimbursement—Medicare, All Areas

Year	Supplementary	
	Hospital Insurance	Medical Insurance
1967	0.998	1.002
1968	1.002	1.003
1969	1.005	1.004
1970	1.008	1.005
1971	1.011	1.006

¹For 1969 data, see Office of Research and Statistics, U.S. Social Security Administration, *Medicare: Health Insurance for the Aged, 1969, Section 1, Summary* (Washington, D.C.: U.S. Government Printing Office), in preparation.

Table B: Computation of Age-sex Indices, Alabama, 1971

Sex and age	Hospital Insurance			Supplementary Medical Insurance		
	"Standard" relative reimbursement	Enrolled population 7/1/71	Weighted by relative reimbursement	"Standard" relative reimbursement	Enrolled population 7/1/71	Weighted by relative reimbursement
	(1)	(2)	(3=2x1)	(4)	(5)	(6=4x5)
<i>Men</i>						
65-6980	52,322	41,858	.90	51,049	45,944
70-7495	37,288	35,424	1.05	36,026	37,827
75-79	1.20	24,922	29,906	1.20	23,578	28,294
80-84	1.50	13,697	20,546	1.30	13,185	17,140
85 and over	1.80	8,532	15,358	1.35	8,160	11,016
<i>Women</i>						
65-6965	63,847	41,501	.80	65,294	52,235
70-7485	52,342	44,491	.90	50,995	45,896
75-79	1.10	40,357	44,393	1.05	39,630	41,612
80-84	1.40	24,399	34,159	1.15	23,870	27,450
85 and over	1.65	16,345	26,969	1.25	15,580	19,475
Total		334,051	334,605		327,367	326,889
Age-sex index, Alabama	(3 ÷ 2)	=	$\frac{334,605}{334,051}$ 1.002	Age-sex index, Alabama	=	$\frac{326,889}{327,367}$.999

These indices provide a gross measure of the extent to which the average per capita reimbursement under the Medicare program changes from year to year because of annual changes in the distribution by sex and age of persons enrolled under the program.

The geographic index is the ratio of the per capita reimbursement for a specific area to that for "All Areas" after both figures have been age-sex adjusted. Thus, for Alabama, in 1971:

	HI	SMI
1) Total reimbursements	\$64,883,303	\$26,854,242
2) Reimbursement per person enrolled	\$ 194.23	\$ 82.03
3) Age-sex index (table B)	1.002	.999
4) Age-sex adjusted reimbursement per person enrolled, (2 divided by 3)	\$ 193.84	\$ 82.11

For "All Areas" in 1970:

	HI	SMI
1) Reimbursement per person enrolled	\$ 258.32	\$ 99.94
2) Age-sex index (table C)	1.011	1.006
3) Age-sex adjusted reimbursement per person enrolled, (1 divided by 2)	\$ 255.51	\$ 99.34

The Geographic Index then, for Alabama is the ratio of its adjusted reimbursement to that for "All Areas," or

HI	SMI
\$ $\frac{193.84}{255.51}$	\$ $\frac{82.11}{99.34}$
= .759	= .827

Source of Data: Qualifications and Limitations

This report uses for each county the enrolled populations and the reimbursement amounts published

in an earlier release.² The calculations of the age-sex index for each area used enrolled populations as of July 1, 1971 for each county by age and sex contained in unpublished tables on file with the Office of Research and Statistics. The enrolled populations by age and sex are published only for political subdivisions larger than a county.³

Qualifications and limitations of the data, as well as the provisions of the Medicare law, are contained in the Medicare reimbursement and enrollment reports. Attention is drawn especially to the following:

1. a. Reimbursements are associated with the area in which the covered person resides rather than the area in which the services are rendered.
- b. The statistics refer only to persons 65 and over covered for Medicare benefits and only to amounts paid for those benefits. Geographic indices for younger persons and other benefits would not be the same.
2. In any one calendar year, the relative difference between reimbursements as used for this report and the cost of services rendered in that year can vary considerably from county to county. For any one county, however, the plus and minus differences on this account should balance each other over the years.
3. The geographic indices reflect the composite effect of all those influences, other than age and sex, which produce variation in the per capita reimbursement for medical care. The price per unit of care, for instance, is but one of many such influences: the availability of services is another.

Tables

Notes

Health Insurance for the Aged.—The program, commonly known as Medicare, that pays for part of the cost of hospital and medical services for participating persons aged 65 and over.

Geographic Index)
) See text.
Age-Sex Index)

Reimbursement per person enrolled.—Based on reimbursement amounts, and mid-year enrollment shown in an earlier report, *Reimbursement by State and County, 1971*. These figures are *not* adjusted.

Geographic Classifications.—Based on the address to which the enrollee's cash benefit check is being mailed. For persons not receiving such benefits, the mailing address given at the time they applied for health insurance benefits is used. Temporary or permanent changes of residence are reflected in the data to the extent that such changes are reported to the SSA by enrollees.

All Areas: Consists of the United States, Guam, Puerto Rico, Virgin Islands, all other areas, and foreign countries.

United States: Consists of the 50 States, the District of Columbia, and residence unknown.

All Other Areas: Consists of American Samoa, the Canal Zone, Canton Island, Caroline Islands, Mariana Islands, Marshall Islands, Midway Islands, and Wake Island.

County: The primary divisions of the 50 States are, in general, counties. In Louisiana, however, these divisions are known as parishes. Alaska is divided into 21 economic areas, included here as the equiva-

lent of counties. A number of cities that are independent of county organizations are reported separately in Maryland, Missouri, and Virginia. The divisions in Puerto Rico are called municipalities. The District of Columbia, Guam, and the Virgin Islands are not further subdivided.

Metropolitan and Non-Metropolitan Counties: The division of counties into metropolitan and non-metropolitan groups is based on the list of standard metropolitan statistical areas (SMSA) as classified in 1970 by the Office of Management and Budget. Except in New England, each SMSA includes a county containing a central city of at least 50,000 inhabitants, based on the 1970 census. In addition, contiguous counties are included in the SMSA if they meet certain criteria of economic and social integration with the central city. In New England, an SMSA consists of towns and cities, rather than counties. However, the data included in this report were available only for counties. Therefore, for New England, the SMSA was replaced by the State metropolitan economic area (SMEA), which is defined in terms of whole counties.

Metropolitan counties are those counties included in an SMSA or an SMEA. These counties were further divided into those containing at least part of the central city of the SMSA and those not containing any part of the central city. Non-metropolitan counties are all counties not included in some SMSA or SMEA.

Metropolitan counties are identified by the number of the standard metropolitan statistical area of which they are a part; the number is followed by a *C* for the central city county.

Other Data Sources on the Medicare Program

The *Health Insurance Statistics* series is designed to present current, quick-release data from the Medicare Program. Two report series are issued in this format:

The *Health Insurance* (HI) series has included numerous releases since 1967. Issues released prior to 1970 are out of print, but available in many libraries.

The *Current Medicare Survey* (CMS) series is based on data from the continuing Current Medicare Survey.

Future releases in the HI and CMS series may be obtained upon request to the Publications Staff, Office of Research and Statistics, Social Security Administration, Room 1120 Universal North Building, 1875 Connecticut Avenue, N.W., Washington, D.C. 20009.

The *Social Security Bulletin*, published monthly, presents authoritative articles and analyses of medical care expenditures, prices, and utilization as well as current operating statistics from the Medicare program. The *Annual Statistical Supplement* to the *Bulletin* includes summary data on trust funds, services, claims, enrollment, average charges and participating providers of service under Medicare. The *Bulletin*, including the *Supplement*, is available in most libraries and by subscription at \$10.45 a year from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The *Research and Statistics Note* series reports on-going research, preliminary findings or provides addenda to material already published on the old-age, survivors, disability, and health insurance program. Designed to get information quickly into the hands of users, the series includes data on medical care prices, outlays, and expenditures. The series is available in many libraries. Future releases may be obtained upon request to the Publications Staff, Office of Research and Statistics, Social Security Administration, Room 1120, Universal North Building, 1875 Connecticut Avenue, N.W., Washington, D.C. 20009.
